*"Customer service is quick to respond and listens to changes and enhancements. The system itself is so adaptable and gives you the ability to customize for your practice. Text and email reminders straight out of Crossfire, not an outside program, has significantly decreased our no show rate. With multiple offices it not only reinforces the visit information, but the location, as well. I would highly recommend Crossfire!" - Dr. Michael Ragan, DDS*

## WHY CROSSFIRE?

Sometimes getting to the best possible solution for your practice isn't about finding the right answers - it is about asking the right questions. So, rather than thinking about why you would want to choose Crossfire, we offer a better question:

Why would you consider anything less for your practice?

Crossfire provides the longest-functioning fully integrated Windows product in the orthodontic marketplace - something we have been doing since 1995. In fact, of the integrated systems on the market today, Crossfire was the first to offer a completely paperless solution. With more than 175 years of experience in orthodontic management computerization, our staff is the most fully tenured you will find in our industry. That longevity has enabled us to develop and maintain a reliable, consistent and secure practice management system as well as support services that are second to none.

At Crossfire, we believe in providing you with solutions that are scalable and usable in your practice. Since its inception, the company has been privately owned and guided by the vision of our founder, along with hundreds of orthodontists, orthodontic consultants, and practice personnel who have contributed their experience.

For the past 22 years, Crossfire has been the gatekeeper of development in orthodontic software. We are committed to remain at the leading edge of development in our field. You will not find this combination of features and benefits with any other system:

- Internet forms for patients (Crossfire InFlow)
- Workflows and Texting
- Lighting system, Automated patient check-in and check-out
- Immediate task assignments to staff
- Imaging, Cephalometric Analysis, and Crossfire Envision Case Presentation with email capabilities
- Automatic document system
- Treatment planning married to the treatment card
- Tooth chart interactive with treatment card
- Links between digital x-rays and to the latest Cone Beam technology (Anatamage)
- Business intelligence module with Dash Board and Pivot Cube, providing the widest array of interactive reports available in the field. New Custom reports created to meet your specifications.
- Integrations with: TransFirst, TeleVox, all digital x-rays companies, Dolphin Ceph, Vistadent Ceph, Quick Ceph, JulySoft, Orthosesame, OrthoCAD, SureSmile, Solutions by Design, etc.
- Partners with TeleVox, Solutions By Design, TransFirst, Anatamage, TransForm, and Transworld Systems

It is often said that imitation is the highest form of flattery, and at Crossfire we have found that to be true. We have been innovators in our industry, and we also keep pace with Microsoft's SQL, Windows 10 and .net. The product offerings invite you to see the difference for yourself.

### CROSSFIRE STRATEGIC PARTNERS

# CROSSFIRE SALES SUPPORT

Crossfire serves you every step of the way! Whether you are an inquiring dental professional or a seasoned user, Crossfire sales and support staff are eager to help get the results you want.

## Sales Support

To inquire about Crossfire products, you can speak directly with one of our sales representatives at (800) 528-2978 between 8:00am and 5:00pm EST any business day. We are happy to answer any questions and provide the information you need to make your purchase decision easier.

If you prefer, you can express your interest via e-mail at [sales@crossfireop.com](mailto:sales@crossfireop.com). Please be sure to let us know how to contact you.

Crossfire offers demonstrations of our products either on our website, in person at your office or over the telephone using the latest in multimedia technology.

Please contact a sales representative at (800) 528-2978 for further information.

# INSTALLATION, TRAINING SUPPORT AND CONTINUED SUPPORT

Part of the process of activating your Crossfire purchase includes on-site installation and training by one of our staff. The cost and duration of this visit varies and can last anywhere from two to six days depending upon software and hardware configurations.

During this time, your purchase will be professionally installed, configured especially for your practice, and your staff thoroughly trained in its use. Our installation engineers are specifically trained for this task and are committed to activating your purchase in the shortest time possible without sacrificing quality.

Crossfire is also ready to help you plan and configure the software for effective integration into your practice environment. Soon after your purchase order is processed, we will send you a packet containing a proposed itinerary of events, configuration forms, system reference manual, and sample correspondence. You also get immediate, unlimited access to our technical support team.

Crossfire can electronically convert most of your pre-existing databases. This service makes the transition from your current application suite to Crossfire relatively seamless. Crossfire system engineers are adept at extracting data from both open-architecture and proprietary database formats.

Crossfire offers both software and diagnostic maintenance agreements tailored to your specific needs. In general, our software agreement guarantees your practice scheduled software updates and unlimited access to our technical support team.

Crossfire also conducts periodic training Webinars and utilization meetings. Specific times and locations will always be announced well in advance on the Crossfire website.

*"For nearly 16 years, we have utilized Crossfire for our Practice Management software. Creating custom workflows is by far my favorite piece of their software. Workflows provide consistency & accuracy in tracking office stats via reports, and allows us to create customized training to ensure standard operating procedures for new hires."* – Linda Lutmer, FAADOM Practice Administrator  
Igel Orthodontics

## Crossfire Intuitive Workflow Module

Crossfire created an industry first when we developed our Intuitive Workflow Module 22 years ago. It remains the most powerful tool available in any practice management software system on the market today. Many of our competitors have tried to copy or duplicate Crossfire's workflow system, but to date no other company has come close to offering this exclusive tool.

What are Workflows? Workflows are practice-defined processes or procedures that will step the operator through the progression of completing the task at hand, complete with scripting and if/then logic. Your practice can choose from the 50+ Workflows provided by Crossfire or you may easily create your own custom Workflows through our simple-step program.

### Why are Workflows so powerful?

Simply because they can be created to accomplish any task or process and they step the operator through how to complete tasks so the task is done the same way every time, no matter which staff initiates the workflow. They can also be scripted to aid new staff with verbiage and process. You can also build in logic so the workflow knows which questions to ask based on previous answers. An example of this would be, "Does the patient have TMJ issues?" If the answer is "No," the workflow skips any additional questions about TMJ. If the answer is "Yes," the program leads to additional questions, launches a program, or triggers your printer. The workflow program can do this anywhere downstream, not necessarily just with the next question. Some practices use the if/then logic to help treatment plan cases or suggest logical plans based on previous answers. The Intuitive Workflow Module can also add as many searchable data fields as needed (but you probably will not need to add many because there are over 500 fields complete with questions, scripting, and multiple verbiage streams for correspondence). Any workflow with questions and answers can be imbedded on your treatment card and retrieved with one mouse click. Examples of this

would be your initial exam findings or six-month review findings. Our workflow module can also automatically launch into your reminder system, scheduler, treatment planning system or any other program on your workstation, and then resume the workflow. You need to experience this module to believe it's power!

### How can your practice use Crossfire's Intuitive Workflow Module?

Add new patients, check patients out, complete new patient exams, enter dental medical history, treatment plan cases, print correspondence associated with any workflow, complete insurance entries including setting up contracts, end of day procedures, end of month procedures, insurance pre-authorization, completely process lab procedures, and patient treatment reviews. The possibilities are endless! Workflows can launch any program, whether it is in or outside our program, and can launch them as a part of a more extensive workflow. Speak with any one of our helpful staff members to learn how the Intuitive Workflow Module can streamline the processes in your practice today!

*Workflows are yet another industry first created by Crossfire.*

Crossfire offers full integration of all accounting tasks-front and back office and provides a seamless way to manage the business side of your practice.

The screenshot displays two windows from the Crossfire Accounting software. The top window is a 'New Patient Ledger' showing a list of transactions with columns for Date, Description, Responsible, Amount, Contract (Initial), Current, and Balance. The bottom window is a 'Payment Calculator' showing a 'Monthly Payment' of 126.49. It includes fields for Treatment cost (4000.00), Insurance (1000.00), Financial Obligation (2750.00), and Total out-of-pocket (2776.81). It also shows options for financing terms (12, 18, 24, 36, 48, 60 months) and interest rates.

Check your patients or families out in one step. With Crossfire, a walk-out statement is automatically generated that includes posted procedures of a patient's treatment status, as well as an appointment reminder and school excuse. A ledger of all activity for any patient, responsible party or insurance company can be viewed and printed on demand.

Contract payment schedules, refinances and mail-in payment coupons are easily alterable and accessible. All statements are customizable. Our system automatically integrates with electronic bank draft for ACH and credit cards. We also support credit card drafts and post-dated checks. Additionally, late charges and interest fees can be posted automatically. The module also handles Medicaid patients and we offer an optional accrual based accounting module, if desired. Crossfire just completed a program that will allow you to charge interest on contracts and let the patient choose their payment.

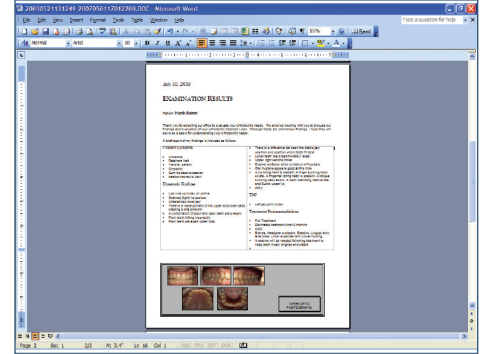

## DOCUMENT SYSTEM

Communication is critical to your success. Whether sending information to patients, doctors, insurance carriers, guarantors or referrals, Crossfire Document System has the tools to communicate effectively. The module provides the ability to design and print letters based on patient and treatment information, merged with the images that you select, in any format you desire. The Document Ledger maintains a permanent, date-stamped, read-only copy of all letters sent to patients and insurance companies, providing a historical paper trail. The system facilitates scanning documents into patient files and storing e-mails, with easy access from a permanent, historical ledger. The system also includes the following features.

- Direct email of documents to patient, doctors or responsible party
- Batching of documents for later processing
- Interoffice document approval routing
- Integration of digital signature pad or a Tablet PC for a paperless practice

A paperless document management system is now a reality with the Crossfire Document System.

## INFLOW

Crossfire Inflow allows patients to securely access and complete their new patient information forms in your waiting room after arriving at the practice or online from the InFlow app. Appointment information can also be displayed in InFlow. Crossfire InFlow will be enhanced over time to become The Crossfire Cloud; pushing and pulling data securely into and out of your database to provide patients a secure, up-to-date patient portal.

## OTHER FEATURES

Crossfire provides features with the following interoffice modules:

**Task Administrator\*:** Sets up staff assignments triggered automatically by events performed by the system, including working with past-due accounts, no-shows, walk-outs, status changes, procedure postings, and more.

**User Assignments\*:** Generates interoffice “to-do” lists based on practice-generated tasks and tracks current and completed assignments for each user.

**Reminder System\*:** Provides patient-specific, date-sensitive pop-up reminders as set by the office staff— one-time or recurring.

**Conversation System\*:** Provides a communication log for the staff’s dialogues with patients and insurance companies concerning specific topics

of conversation, such as financial and/or treatment matters, as well as easy access to recorded conversations in a permanent, historical ledger.

**Patient Query\*:** Provides the ability to search the Crossfire database using the fields completed in the workflow screens and enables you to configure the query structure to suit the needs of your practice. Increased functionality with Interactive Report Queue adds navigation to the reporting screen.

**Fingerprint Login Security:** Further increase the security of your system by utilizing finger print identification for staff and patient system login.

**Insurance:** Uses patient and treatment information to create printable or electronic insurance forms for preauthorization, single submission and continuation.

**Digital Signature Pads:** The addition of a signature pad adds paperless capability to the document system.

**Secure Document Archive:** Converts word documents to PDF format, reduces your document disk/file storage up to 90% and creates a secure read-only file.

**Business Intelligence:** When it’s time for practice management reporting and analysis, our optional Business Intelligence module provides a comprehensive view of your practice’s key performance indicators of scheduling, financial, clinical and marketing information. Each of these tools presents the information you need to operate efficiently and profitably.

*"My practice has been using Oasys for 20 years. The Treatment Plan Protocols have changed the way I practice. I am able to deliver higher quality treatment much more efficiently." - Dr. John R. Smith, DDS, MSD*

## 7 SCHEDULING

With Crossfire, all of your office's scheduling tasks are at your fingertips through our intuitive, interactive screens. You'll find ease of use, convenience and simplicity in completing the following tasks:

**Accessing information:** You can instantly access a patient's appointment and link sequential appointments to maintain proper treatment procedure. Expanded information in the scheduling screen includes patient and treatment card information, alerts and other vital information. You're also able to have as many appointment books as you have offices and automatically display all family members' appointments.

**Rescheduling:** Rescheduling and tracking different types of appointments are simple tasks through use of the drag and drop or the appointment schedule screen. You can also search for specific appointments and summarize a patient's appointment history.

## PATIENT FLOW

Make patient flow more efficient than ever with automated patient check-in, lighting and patient check-out.

**Check-In:** Crossfire enables you to automate check-in procedures and customize them to your practice's patient flow. The display of patient names is HIPAA compliant. Patients Check-In using keyboard and mouse, touch-screen monitors or a biometric finger print scanner. The arrival time of each patient is accurately recorded and you can even set up patient-specific birthday greetings and messages to be displayed as they check in.

\*An industry first by Crossfire

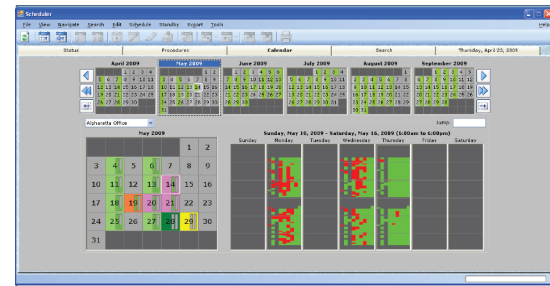

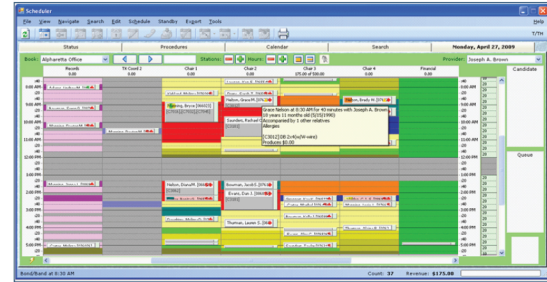

**Printing reports:** Multiple options are available for scheduling reports and printing computer-generated appointment tickets as well as work or school excuses.

**Easy viewing:** Various viewing options and color-coded scheduling provide at a glance or in-depth access to appointments. Plus, "doctor time" scheduling maximizes doctor efficiency. In addition, you can create notes on the schedule, block time on the fly, view the number of patients and total revenue per scheduled day.

**Email/Text:** Send text messages or emails to all patients and their responsible parties who are scheduled on a particular day. For example, appointment reminders and even a separate message to those patients who owe payments.

**Online Scheduling:** Coming Soon! Patients can schedule online within practice defined parameters.

**Wait List\*:** Can be automated by placing a patient on the wait list until an appropriate appointment time becomes available.

**Lighting\*:** Tracking features allow you to follow each patient's progress through the office, from arrival through departure and gauge the efficiency with which they move through your practice. You and your staff can know at a glance which patients are waiting to be seen, who is "on deck," how long they have waited, where doctors are supposed to go next, which stations are available and more.

**Check-Out\*:** With Crossfire's optional automated check-out procedure, patients can check themselves out—similar to how they do at a grocery store. You can set practice-defined parameters about who can use the self-check-out feature and send patients who are not on the list to the receptionist. Using the system, patients can even set up their own follow-up appointments based on practice-defined times. One of our users reported that this module saved him two staff members.

# TREATMENT CARD

Integrate all your patients' treatment activity into our Treatment Card, Graphical Tooth Chart, Treatment Planner and Treatment Intelligence.

**Treatment Card\*** maintains a treatment history of all procedures to be performed on a patient while tracking all completed procedures and notes. The customizable treatment profile allows instant access to the information you consider most critical, in the format you desire. Benefits include:

- A graphical timeline showing a patient's progress through treatment
- Treatment notes and procedures in an easy-to-use list format
- The ability to ensure that instructions to both patients and staff are acknowledged
- Embedded forms in the Treatment Card Ledger linked to a read-only copy of the document
- Tracking of the minutes a patient was in the treatment chair
- Easy recording of procedure specifics (tooth, surface, bracket, size, etc.), integrated in the Treatment Planner
- Prescription tracking module

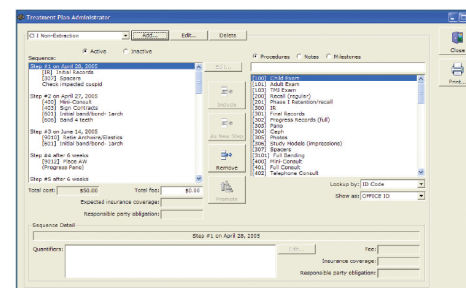

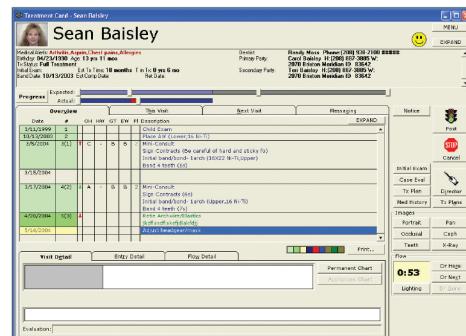

The **Graphical ToothChart\*** is the next generation of treatment card automation. Utilizing a graphical interface, this additional module provides an integrated approach to all treatment information with an interactive tooth chart. You can record, update and view all orthodontic and dental records, as well as track all detailed procedures by date in the procedure ledger. Notes can be made and reviewed in the chart easily and its integration with Crossfire's Treatment Planner allows you to view the chart from the past, present and future visits. Layout of the screen is determined by the practice and you may have as many different layouts as you can design.

**Ortho Treatment Planner\*** helps you to stay on course. Visual alerts highlight when a patient's treatment deviates from the projected plan, how far behind schedule a patient's treatment is and how many unplanned visits are adversely affecting treatment goals. Additional advantages include:

- Tracking of the patient's expected treatment for the next visit
- The ability to have one active treatment plan and an unlimited number of alternative treatment plans on file for each patient
- A color-coded ledger to indicate which items were unplanned, ignored or superseded and which should be completed at the next visit

**Pedo Treatment Planner\*** allows you to create a problem list and schedule appointments from the list or create a detailed plan with multiple appointments. Reports are created to let you know what is left to be treated and how much revenues they represent.

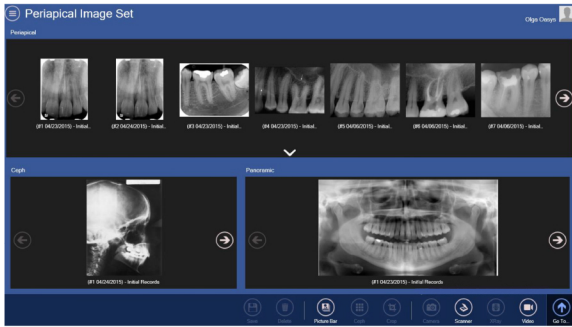

\*An industry first by Crossfire

**Treatment Intelligence\*** will analyze the patient in the chair for cooperation, treatment time, chair time, number of visits, estimated finish date and much more data. This can be accessed at chairside anytime or you can do a case analysis at the end of treatment. It will allow you to analyze certain treatment types for averages such as chair time, number of visits, etc. This is a big deal because it will be the first time ever that you can analyze different treatment types and get meaningful information that can aid in properly pricing cases as well as help you identify and correct treatment practices. This product can also raise red flags when treatment begins to go off the rails.

# IMAGING

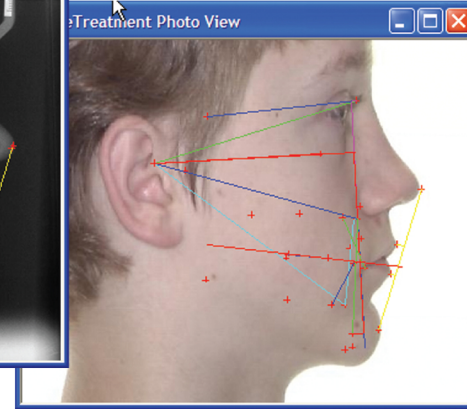

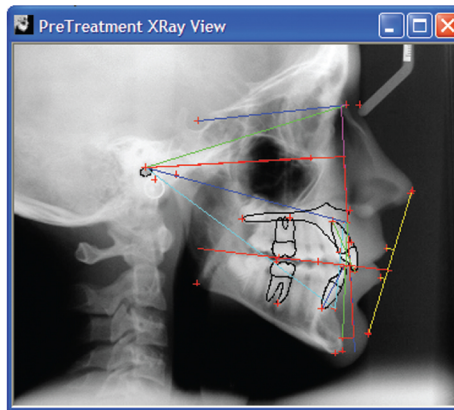

Crossfire provides customizable imaging solutions to fit the way you work. Whether it is viewing periapicals, digital X-rays, Ceph's, photos, panos or something else, the images you need will be right at your fingertips. Our integrated permanent storage solution provides a place for all your images. Crossfire allows you to edit, import, export and manipulate images that work with most digital x-ray equipment, digital cameras, scanners and printers. When integrating with Windows-based systems, you will be able to enhance your marketing image and combine photos and x-rays with word processing to create professional correspondence. The Collage and Medical Imaging Modules provide additional presentation capabilities utilizing image annotations, on the fly cropping, and 3D imaging integration of DICOM files.

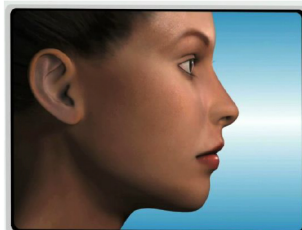

3D Skull

The addition of **CrossfireCeph** enables you to obtain a more comprehensive diagnostic image by providing fast, quality Cephalometric analysis to our Imaging module. In addition you have the ability to superimpose phases for graphical comparisons and easy-to-use projections. You can select from 40 major analyses or customize any analysis to meet your specific requirements. The computerized Cephalometrics also allows you to show dental, skeletal, genioplasty, and growth predictions with easy-to-use projections, and to compare and display anatomical measurements to established norms and easy reference points.

## Crossfire Envision:

This sophisticated case presentation program allows the user to present clinical problems, specific to patient age and malocclusion, and then to present treatment options according to your recommendations. Crossfire Envision goes much further than a tool for in-office case presentation; your clinical findings, paperless forms and patient education videos are all part of Crossfire Envision. After the examination, you can email or burn a CD of the entire presentation for the patient, including patient records, findings, problem and treatment animations, and videos, so the patient can review all of the information at home.

Molar Implants

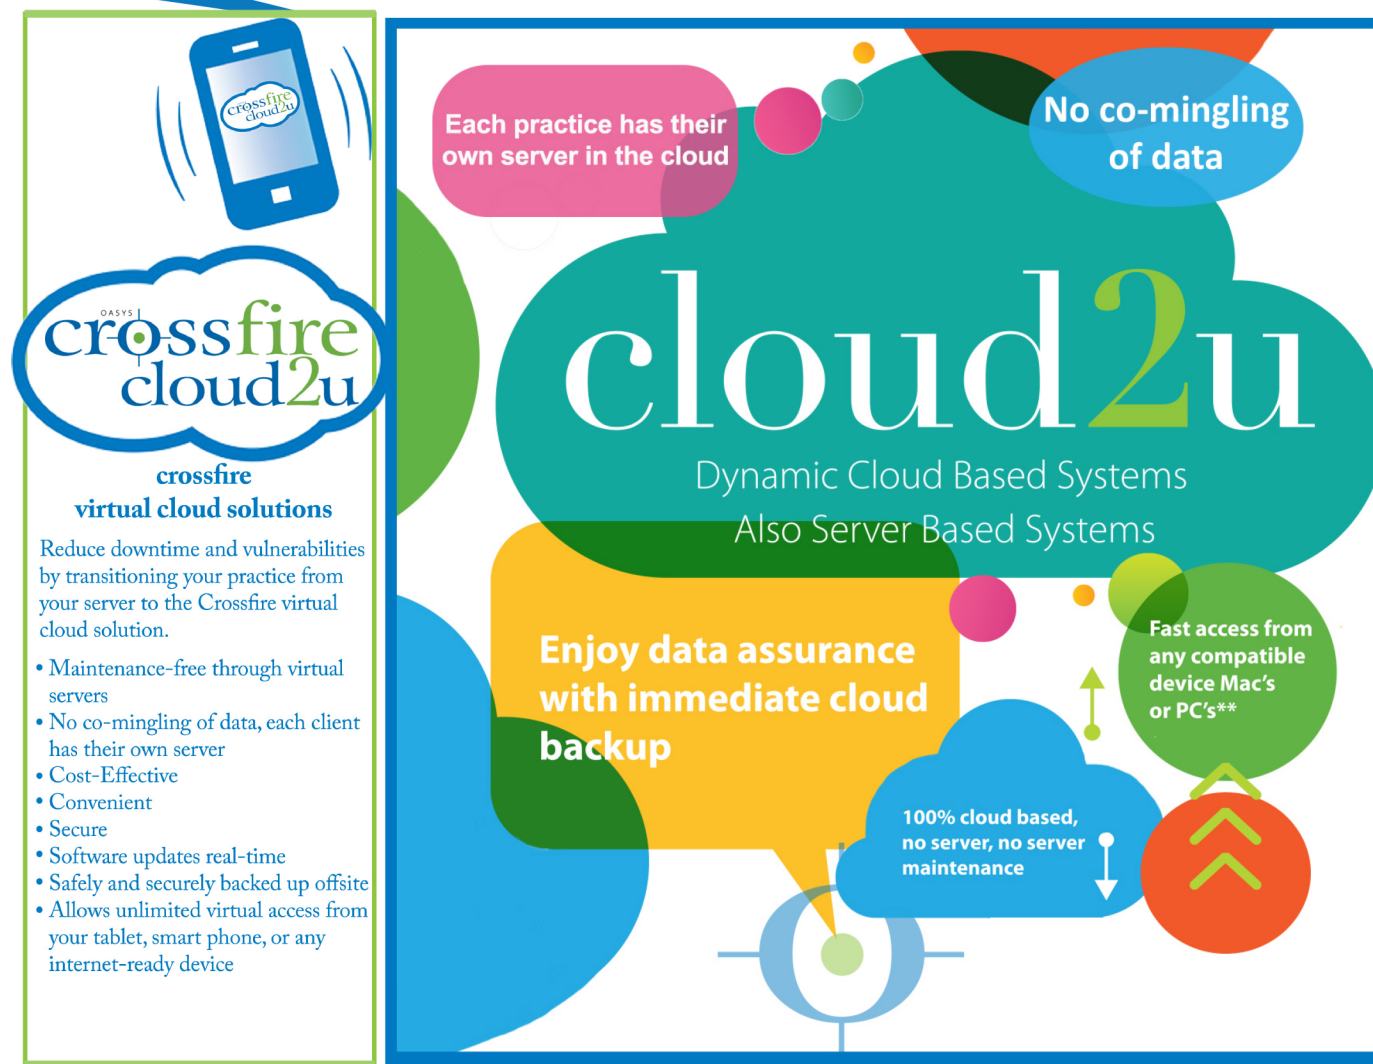

DamonQ

## Crossfire Envision features:

- Comprehensive library of full-motion videos, 3D animations, clinical and before-and-after photos
- Customizable treatment protocols
- Export videos or burn to a CD
- Zoomable user interface
- Fully integrated with Crossfire's Workflows

*"Crossfire cloud has been a life saver! With multiple offices, we now have everything at our finger tips, no matter where we are!" - Dr. Michael Ragan, DDS*

A colorful graphic advertisement for Crossfire cloud2u. The central focus is the text 'cloud2u' in a large, white, lowercase font, with '2u' in a green font. Below it, the text 'Dynamic Cloud Based Systems' and 'Also Server Based Systems' is displayed. The graphic is surrounded by various callouts and icons. At the top left, a smartphone icon shows the 'crossfire cloud2u' logo. A pink callout bubble says 'Each practice has their own server in the cloud'. A blue callout bubble says 'No co-mingling of data'. A yellow callout bubble says 'Enjoy data assurance with immediate cloud backup'. A green callout bubble says 'Fast access from any compatible device Mac's or PC's\*\*'. A blue callout bubble says '100% cloud based, no server, no server maintenance'. The background features abstract shapes in green, blue, and orange, along with a stylized cloud icon at the bottom center.

**crossfire cloud2u**  
crossfire  
virtual cloud solutions

Reduce downtime and vulnerabilities by transitioning your practice from your server to the Crossfire virtual cloud solution.

- Maintenance-free through virtual servers
- No co-mingling of data, each client has their own server
- Cost-Effective
- Convenient
- Secure
- Software updates real-time
- Safely and securely backed up offsite
- Allows unlimited virtual access from your tablet, smart phone, or any internet-ready device

Each practice has their own server in the cloud

No co-mingling of data

**cloud2u**  
Dynamic Cloud Based Systems  
Also Server Based Systems

Enjoy data assurance with immediate cloud backup

Fast access from any compatible device Mac's or PC's\*\*

100% cloud based, no server, no server maintenance

Now you can determine the level of service your practice needs with Oasys IT and Crossfire Recovery. Discover the benefits of monitored backup that guarantees your data with verification, and a technology liaison that can help your practice in the cloud. It's a new era in IT and with Crossfire, it's *All Systems Go!*

#### Cloud2u Benefits

- Cloud backup – Your Oasys database, all patient images, and all patient documents will be backed up in our Class III data warehouse. You will no longer have to worry about disaster recovery for your physical office in regards to your Oasys software.
- Microsoft Word licenses – Each cloud user will have the most current version of Microsoft Word, which is included in your Cloud2U fee. No more having to purchase the latest Microsoft Word products to be able to produce patient documents from Oasys.
- Stay up-to-date with Oasys software. As a cloud client your office will have the latest updates from Oasys, support representatives will have easy access to ensure your Oasys software is up-to-date.
- Remote access from anywhere with an internet connection. You will have remote access to the full Oasys software from any device with an internet connection.
- Your data and your Oasys program will be housed on a dedicated set of servers for your office in the cloud. Your data and Oasys program are not on a shared server like many of our competitors.

#### Verifiable Backups with Crossfire Recovery

Do you perform ritualistic data backups? As more offices move to paperless operations, doctors and practice managers need to be unequivocally certain that their data is safe, secure, and accessible. But did you know that nearly half of all practices who think their data is sufficiently backed up find out there is a flaw in their protocol and cannot actually access their backed-up files in the event that they need them? Let Crossfire Recovery's offsite backup help protect your office from data loss.

\*Crossfire IT is not designed to replace your local IT company. Crossfire IT is a remote support help desk and backup program. Practices will incur additional fees for on-site support when requested, billed at an hourly rate plus expenses. Crossfire IT and Crossfire Software are two separate entities and will be billed separately.

## CROSSFIRE – RELIABILITY, SCALABILITY, SECURITY, HIPAA COMPLIANT

Of all the tools you use to treat patients, the most important may be the one they don't see.

With Crossfire practice management software, your practice will run smoothly, efficiently and securely so you and your staff can focus on what keeps patients coming back and providing referrals, personalized treatment, and quality care. Whether your office has multiple providers and locations or you're a new graduate just getting started, Crossfire provides solutions that grow seamlessly with your business.

You can expect scalability and security in the operation of Crossfire programs because the database platform is Microsoft SQL. Continual enhancements and updates to the software are based on the input from the people who use it. Our annual user meeting provides an opportunity for office managers, staff and doctors to network and gain knowledge

from other offices on how Crossfire helps make their practice successful. Reliability, the company has been owned and operated by the same individuals for more than 22 years. You will experience consistency in all aspects of your interaction with our staff.

## CROSSFIRE OVERVIEW

Our vision for Crossfire is to help streamline your practice with easy-to-use, integrated software that has been engineered to meet all your needs. With the complete practice management system, you can create a paperless office from the beginning of implementation or work in stages, adding Crossfire features as your practice grows. Crossfire provides unique software features which will compliment your practice's current workflow, including the following components:

- Practice Management and Imaging Suite: Imaging with collage, Scheduling, Accounting, Lighting, Patient Flow, Patient Check-in, Patient Self Check-out, Task Administrator, User Assignments, Reminder and Conversation System, Paperless Document Management System, Insurance (Electronic), Patient Query and comprehensive Reporting System

- Treatment Card and Treatment Plan module
- Graphical Tooth Chart module
- Business Intelligence with Interactive reports and Pivot Cube
- Treatment Intelligence reports
- Workflow automation
- Oasys Ceph module
- Envision module (ScreenPlay)
- 3D module (Anatomage)
- Texting & Email modules
- InFlow patient input (i.e. patient medical history)
- Contract Intelligence

OASYS
